

Ask PermitAIO - how it is built

This is not its own desk. It is the purple button. Inside that button you pick a desk, then you either ASK a question or TELL it to do something. Job number is the source of truth.

1. The structure (what sits where)

Think of three layers. You only talk to the top one. The others are behind it.

Layer A - You, talking

Purple Ask PermitAIO button. You pick Main, Permit, Corrections, HOA, or Support. This is the only thing techs use.

Layer B - The assistant on that desk

On Main and Permit (HOA and Corrections too): recap a job, make a note, or change PERMIT status on a direct command. Support does not do this.

Layer C - You, as owner (Xena)

Owner Console -> Xena. Feed research reports. Company settings do not control her. Techs never open Xena.

2. Two different 'status' words (this is the mix-up)

The inventory row has two status ideas. Ask PermitAIO's assistant only touches one of them.

PERMIT STATUS (it can change this)

The Status pill on the row: Need to Submit, In Review, Approved, Approved and Printed, etc.
A direct command updates THIS.
It also fills submitted date / approved date when those apply.

JOB STATUS (it does not change this)

The blue bar: Engineering Review, Need Permit Submittal, Ordered, Ready to Order, etc.
Ask PermitAIO does not move the blue bar.
You still change that on the inventory / dashboard.

3. Two modes (question vs command)

If it sounds like a question, it only answers. If it sounds like an order, it writes to the job.

DIRECT COMMAND - writes on the job

You used: I submitted / mark / set / change status / status is / here's the permit # (and you did NOT say note only).

NOTE ONLY - writes a note, leaves status

You used: make a note / add a note / note only / don't change status. If you also named a status, the note still wins. Status does not move.

Questions (What's going on with... / How do I submit in Sunrise...) never write. They only recap.

4. Exact mapping (say this -> it does this)

You say	Writes a note	Permit #	Permit status
What's going on with job 100137?	No	No	No change
Make a note on 100137: called the city.	Yes	No	No change
86670-1 approved pending issuance. Note only.	Yes	No	No change
I submitted 86670-1, permit #PR-2026-1.	Yes	Saves it	In Review
Mark 100137 approved.	Yes	No	Approved
Set 94307-1 to Approved and Printed.	Yes	No	Approved and Printed
Change 80962 to Need to Submit.	Yes	No	Need to Submit
Set 93286-1 to In Review.	Yes	No	In Review
Job 100137 permit # B26-03279.	Yes	Saves it	No change
Make a note I submitted 100137.	Yes	No	No change

If there is no job number, it asks for one. If the number is not on file, it says so. It does not invent a job.

5. Status words it understands (permit status only)

Only on a direct command. These are the only permit statuses it will set:

I submitted / submitted this job / mark submitted / in review	In Review
need to submit / needs to be submitted	Need to Submit
quote needed	Quote Needed
engineering pending	Engineering Pending
corrections needed / correction	Corrections Needed
approved (not pending issuance)	Approved
approved and printed / printed	Approved and Printed
complete	Complete

Not a status - approved pending issuance

That is a city nuance, not a pill on the row. Say: Job #____ approved pending issuance. Note only. It writes the note and leaves status where it is.

6. Which desk to open

Main	Everyone. Recap a job. Notes. Direct status commands.
Permit	Permit techs. Same assistant + submittal / forms / NOA questions.
Corrections	City letter or comment. Attach, then Save this to teach the city lesson. That is not a job note.
HOA	HOA techs. Contacts, notes, meetings. Can also take a job note.
Support	Something in the app broke. Logged for you. Does not change a job.
Xena (Owner Console)	You only. Feed Investigator / Form Specialist reports. Not a tech desk.

7. Copy these (until it feels natural)

What's going on with job #100137?

Make a note on job #100137: called Broward, they want a revised NOA.

Job #86670-1 approved pending issuance. Note only.

I submitted job #86670-1, permit #PR-2026-1.

Mark 100137 approved.

Set 94307-1 to Approved and Printed.

8. What it will never do

- Change status because you asked a question.
- Change status if you said make a note / note only.
- Move the blue Job status bar (Engineering Review, Ordered, Ready to Order...).
- Invent a job number, permit number, date, or city rule.
- Run a status change from the Support desk.
- Email the city.

9. One picture of a row

Left to right on Permit Inventory:

Job # Contract \$ Client City Permit # Status (permit) Asgn Sub Appr Ord ETA

Ask PermitAIO assistant writes: a note on that Job #, optional Permit #, optional Status (permit) + Sub/Appr dates. It does not write Contract, Client, City, or the blue bar.

**Short version: Main (or Permit) -> job number -> a question, a note, or a direct command.
Note only = note. I submitted / mark / set = permit status. Blue bar = you, on the board.**
